

NL-14 & NL-14-PRO

Heat seal press

*Fast and energy
efficient*

Highlights • Integrated graphical display • Power saving • Hand operated or foot switch operated • Air operated

With or without.....

We offer two models of the NL-14

The NL-14 table top, air operated, heat seal press is operated by two buttons at the side of the machine.

The NL-14-PRO offers hand and foot switch operation of the machine. When operating the machine by the foot switch both hands are free to hold the item. A safety bracket around the upper platen secures safe operation.

Due to the additional safety it is not possible to upgrade a regular NL-14 to a NL-14-PRO.

Speed

One of the key features of this machine is speed. The machine heats up within minutes to be ready for operation. Due to the heating technology used we also equipped the machine with a power saving mode which can be adjusted to your needs.

Control display

The integrated graphical display shows you all the information required for optimal sealing.
